

**LCD Enclosure Global – Anything else is a compromise.**

## **Taxi Top Digital Signage.**

Our taxi top digital signage enclosure is here, it accommodates 2 stretch screens, either 30" or 36" in a back to back configuration with a media player between the screens, opening up an entire new opportunity for advertising agencies and taxi companies to increase brand awareness.

Manufactured from steel and coated with epoxy powder coating to provide a resilient finish, tough enough to cope with all weather conditions.

The enclosure can be equipped with either a standalone media player that plays a loop of media, or can be supplied with a wireless media player that works on a 3G network (plan purchased separately).

The enclosure is cooled using a unique thermal management system that is

## **LCD Enclosure Global – Anything else is a compromise.**

thermostatically controlled and will cope with temperatures from -20 to 140 degrees Fahrenheit.

The enclosure mounts to the cab, either directly or via roof rails, allowing the unit to be removed if required.

### **So what is included?**

Each unit comes with two internal mounting frames, the thermal management system, 2 x 1/4" thick viewing windows, 2 locks per door (keyed alike or different). Standalone media player that will store 2GB of data including images, video etc.

### **What isn't included?**

The stretch screens, we recommend LG30" and 36" stretch screens due to them being perfect for this application.

Power inverter to power the digital signage, however we can advise on a cost effective solution for you.
